Profile

Backend focused Software Engineering graduate with hands on experience building RESTful systems using Java and C#. Skilled in system design, role based access control, and event driven architecture, with additional experience in real world automation and system integration. Seeking a junior backend developer role to contribute to scalable, production ready systems.

Education

B.Sc. in Software Engineering, Salahaddin University (*Graduate of 2025 - 2026*)

Experience

February 2026 – May 2026

@Gateway ICT Solutions.

Position: Backend Software Developer (Intern).

Main Involvements include but not limited to the following:

- Followed a structured backend development roadmap under senior guidance, covering core concepts in Java and Spring Boot
- Designed and implemented backend projects from scratch, applying concepts such as REST APIs, layered architecture, and database integration
- Applied best practices in clean code, object-oriented design, and functional programming
- Participated in weekly/biweekly code reviews with senior developers to improve code quality, design decisions, and overall system architecture
- Gained hands-on experience with backend technologies including Spring Boot, Hibernate, and SQL-based systems
- Built a strong understanding of backend system design, scalability, and real-world development workflows

2025 – 2026 (Project Based)

@Smartinium Ltd. Co. “*Information and communication technology*”

Position: Smart Systems Integration Specialist.

Main Involvements include but not limited to the following:

- Designed and configured smart home systems integrating sensors, lighting, shutters.
- Built event-driven automation scenarios using rule-based system logic
- Designed and configured web/mobile dashboards for system monitoring and control
- Integrated hardware from multiple vendors into unified automation systems
- Developed device addressing schemes and system blueprints for scalable deployments
- Completed multiple short term projects aligned with company defined requirements and project demands

May 2021 – November 2021

Position: *Graphic Designer.*

Main Involvements include but not limited to the following:

- Designed digital marketing materials using Adobe Photoshop and Illustrator.
- Collaborated with team members to deliver client-focused visual solutions.
- Managed multiple tasks under deadlines while maintaining design quality.

Projects

Order Management System – Java, Spring Boot

Technologies: Java, Spring Boot, SQL Server, Docker

- Designed and developed a backend system using Spring following Hexagonal Architecture
- Implemented RESTful services with rbac (Admin, Driver, User) using Keycloak
- Built order lifecycle management with validation, business rules, and scheduled processes
- Designed and utilized DTOs to data transfer between layers, MapStruct for object mapping
- Integrated SQL Server using Hibernate ORM with Liquibase for database migrations
- Applied pagination and sorting to improve performance and data handling
- Implemented distributed locking and scheduled tasks using ShedLock
- Developed structured logging using SLF4J for monitoring and debugging
- Applied clean code principles with Lombok and functional programming practices (Vavr)
- Designed a centralized exception handling mechanism for robust error management
- Built a console-based interface to simulate real-world backend interactions

Courses & Certifications

Spring MVC, Spring boot, and Rest Controllers

An online course, authorized by Learn-Quest and offered through Coursera.

Technical Skills

Languages: C#, Java, SQL, HTML, CSS, JavaScript Basic Knowledge

.NET Development: ASP.NET, Entity Framework Core, LINQ, Middleware, Data Validation

Java Development: Spring Boot, Spring MVC, Spring Cloud Contracts

Desktop Development: Windows Forms WinForms

Architecture & Design: Layered Architecture, Hexagonal Architecture, Event-Driven Design, CQS Pattern, DTOs, SOLID Principles, Clean Code

API Development: REST API Design, HTTP Methods, HTTP Status Codes, Request/ DTOs, Pagination, Filtering, Sorting, Idempotency, API Versioning, Dependency Injection, IOC

Databases: SQL Server, MySQL, Joins, Transactions, Indexing, Concurrency

Security: JWT Authentication, RBAC, Keycloak, Password Hashing, CORS, Input Validation

Testing: Unit Testing, Integration Testing, JUnit, Mockito

Tools: Git, GitHub, Postman, Docker, Visual Studio, IntelliJ, SQL Server, Liquibase, MapStruct, Lombok, SLF4J

Languages

Kurdish (Native), **English** (Full Professional Proficiency), **Arabic** (Conversational)
